Project APIs for Rooms/Events

Andres Loor - August 2022

These APIs were created Python/Diango considering Model View - Template

(MVT) and the default Database was used for this Project (SQLite 3).
Database URL: http://127.0.0.1:8000/admin/
username: andresloor
password: 12345678
It was required to build 4 classes:
Class Room
ID
Name
Description
Capacity
Class Event
ID
Name
Description
Туре
Date
Room
Available Places

Class Customer ID Name

Description

Class Booking

ID

Description

Customer

Event

Status

CRUD Operations

- GET ROOM LIST
 - o http://127.0.0.1:8000/rooms/
- GET ROOM DETAIL
 - o http://127.0.0.1:8000/rooms/1
- POST NEW ROOM
 - o http://127.0.0.1:8000/rooms/
 - o Body(Name, Description, Capacity)
- PUT UPDATE ROOM
 - o http://127.0.0.1:8000/rooms/3
 - o Body(Name, Description, Capacity)

- DELETE ROOM
 - o http://127.0.0.1:8000/rooms/7
- GET EVENT LIST
 - o http://127.0.0.1:8000/events/
- GET EVENT DETAIL
 - http://127.0.0.1:8000/events/1
- POST NEW EVENT
 - o http://127.0.0.1:8000/events/
 - Body(Name, Description, Type, Date, Room, Available Places)
- PUT UPDATE EVENT
 - o http://127.0.0.1:8000/events/1
 - o Body(Name, Description, Type, Date, Room, Available Places)

0

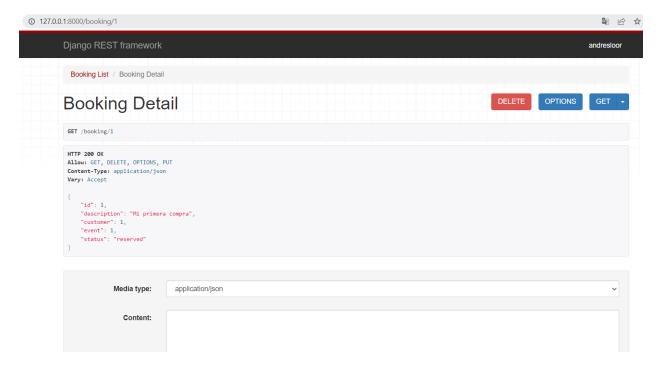

- DELETE EVENT
 - o http://127.0.0.1:8000/events/2
- GET BOOKING LIST
 - o http://127.0.0.1:8000/booking/
- GET BOOKING DETAIL
 - o http://127.0.0.1:8000/booking/1
- POST NEW BOOKING
 - o http://127.0.0.1:8000/booking/
 - Body(Description, Customer, Date, Event, Status)

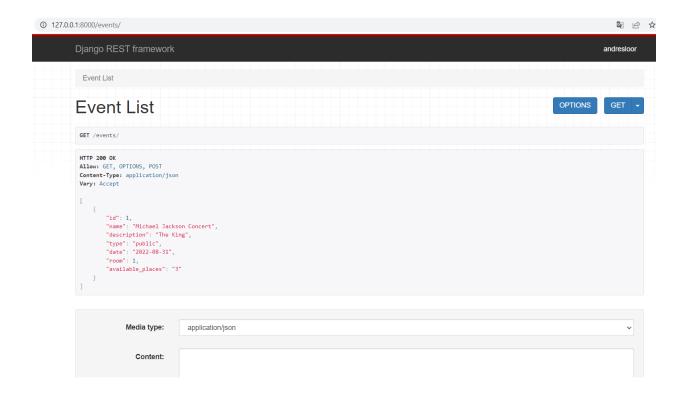

- PUT UPDATE BOOKING
 - o http://127.0.0.1:8000/booking/1
 - Body(Description, Customer, Date, Event, Status)

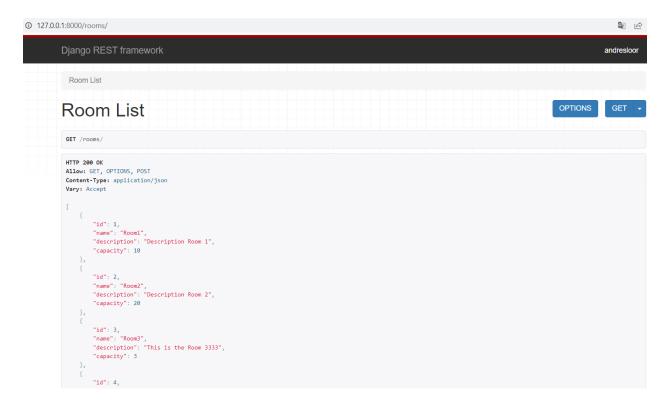

0

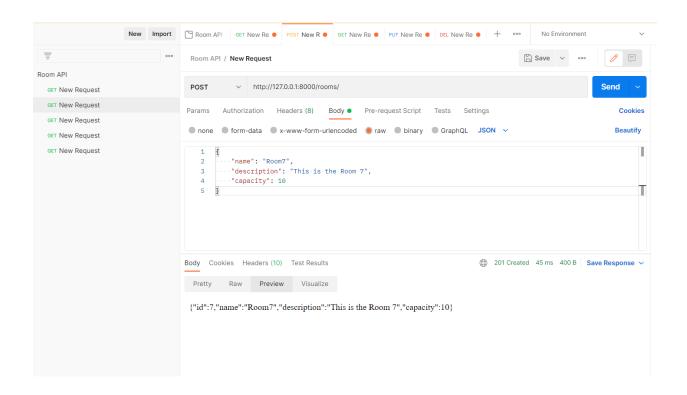

- DELETE BOOKING
 - o http://127.0.0.1:8000/booking/2

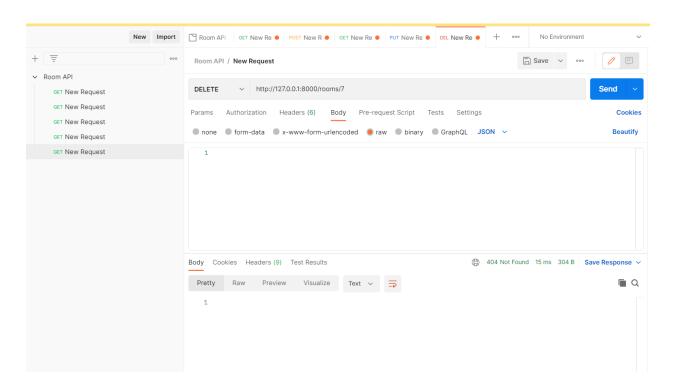

EXAMPLES of how API works

TESTS

The **custome.py** file runs test from the GET LIST classes.

```
(.env) C:\Users\Pichi\django_api\django_api>python consume.py
[{'id': 1, 'name': 'Room1', 'description': 'Description Room 1', 'capacity': 10}, {'id': 2, 'name': 'Room2', 'description
n': 'Description Room 2', 'capacity': 20}, {'id': 3, 'name': 'Room3', 'description': 'This is the Room 3333', 'capacity'
3}, {'id': 4, 'name': 'Room4', 'description': 'Description Room 4', 'capacity': 4}, {'id': 5, 'name': 'Room5', 'description': 'Description Room 5', 'capacity': 10}
ption': 'Description Room 5', 'capacity': 5}, {'id': 6, 'name': 'Room6', 'description': 'This is the Room 6', 'capacity'
6}, {'id': 7, 'name': 'Room7', 'description': 'This is the Room 7', 'capacity': 10}]
[{'id': 1, 'name': 'Michael Jackson Concert', 'description': 'The King', 'type': 'public', 'date': '2022-08-31', 'room':
1, 'available_places': '3'}]
[{'id': 1, 'description': 'Mi primera compra', 'customer': 1, 'event': 1, 'status': 'reserved'}]
```

The command is> python consume.py
